

Personal memo from
JOSHUA LEDERBERG

Barbara Bachmann

AUG - 5 1992

Dear Barbara

Thank you so much for the strains. They have all grown out through the very first culture you sent was heavily contaminated with a non-E-coli.)

We have checked out the most elementary markers (nutritional, lac, streptomycin^R) and they seem OK. There is still in the lab now, but as soon as we have verified (at least) genotype I'll confirm that to you as well.

Cheers,

JL
